

MEZZANINE SAFETI-GATES, INC.

An OPEN and SHUT Case for Plant Mezzanine Safety

CHAIN & SPROCKET GATE MODEL

The Chain and Sprocket Safety Gate from Mezzanine Safeti-Gates is a dual-gate system designed primarily for continuous-use and extreme material handling operations. The gate creates a totally enclosed workstation that provides complete protection for both the employee and materials during loading and off-loading of palletized materials.

Designed to withstand high-use and repetitive full-case pallet handling, the Chain and Sprocket design can be applied to our Roly® or Rack Supported Safety Gates. Roly gates in the Chain and Sprocket design can be ordered in various sizes, and meet all OSHA requirements (toe board excepted).

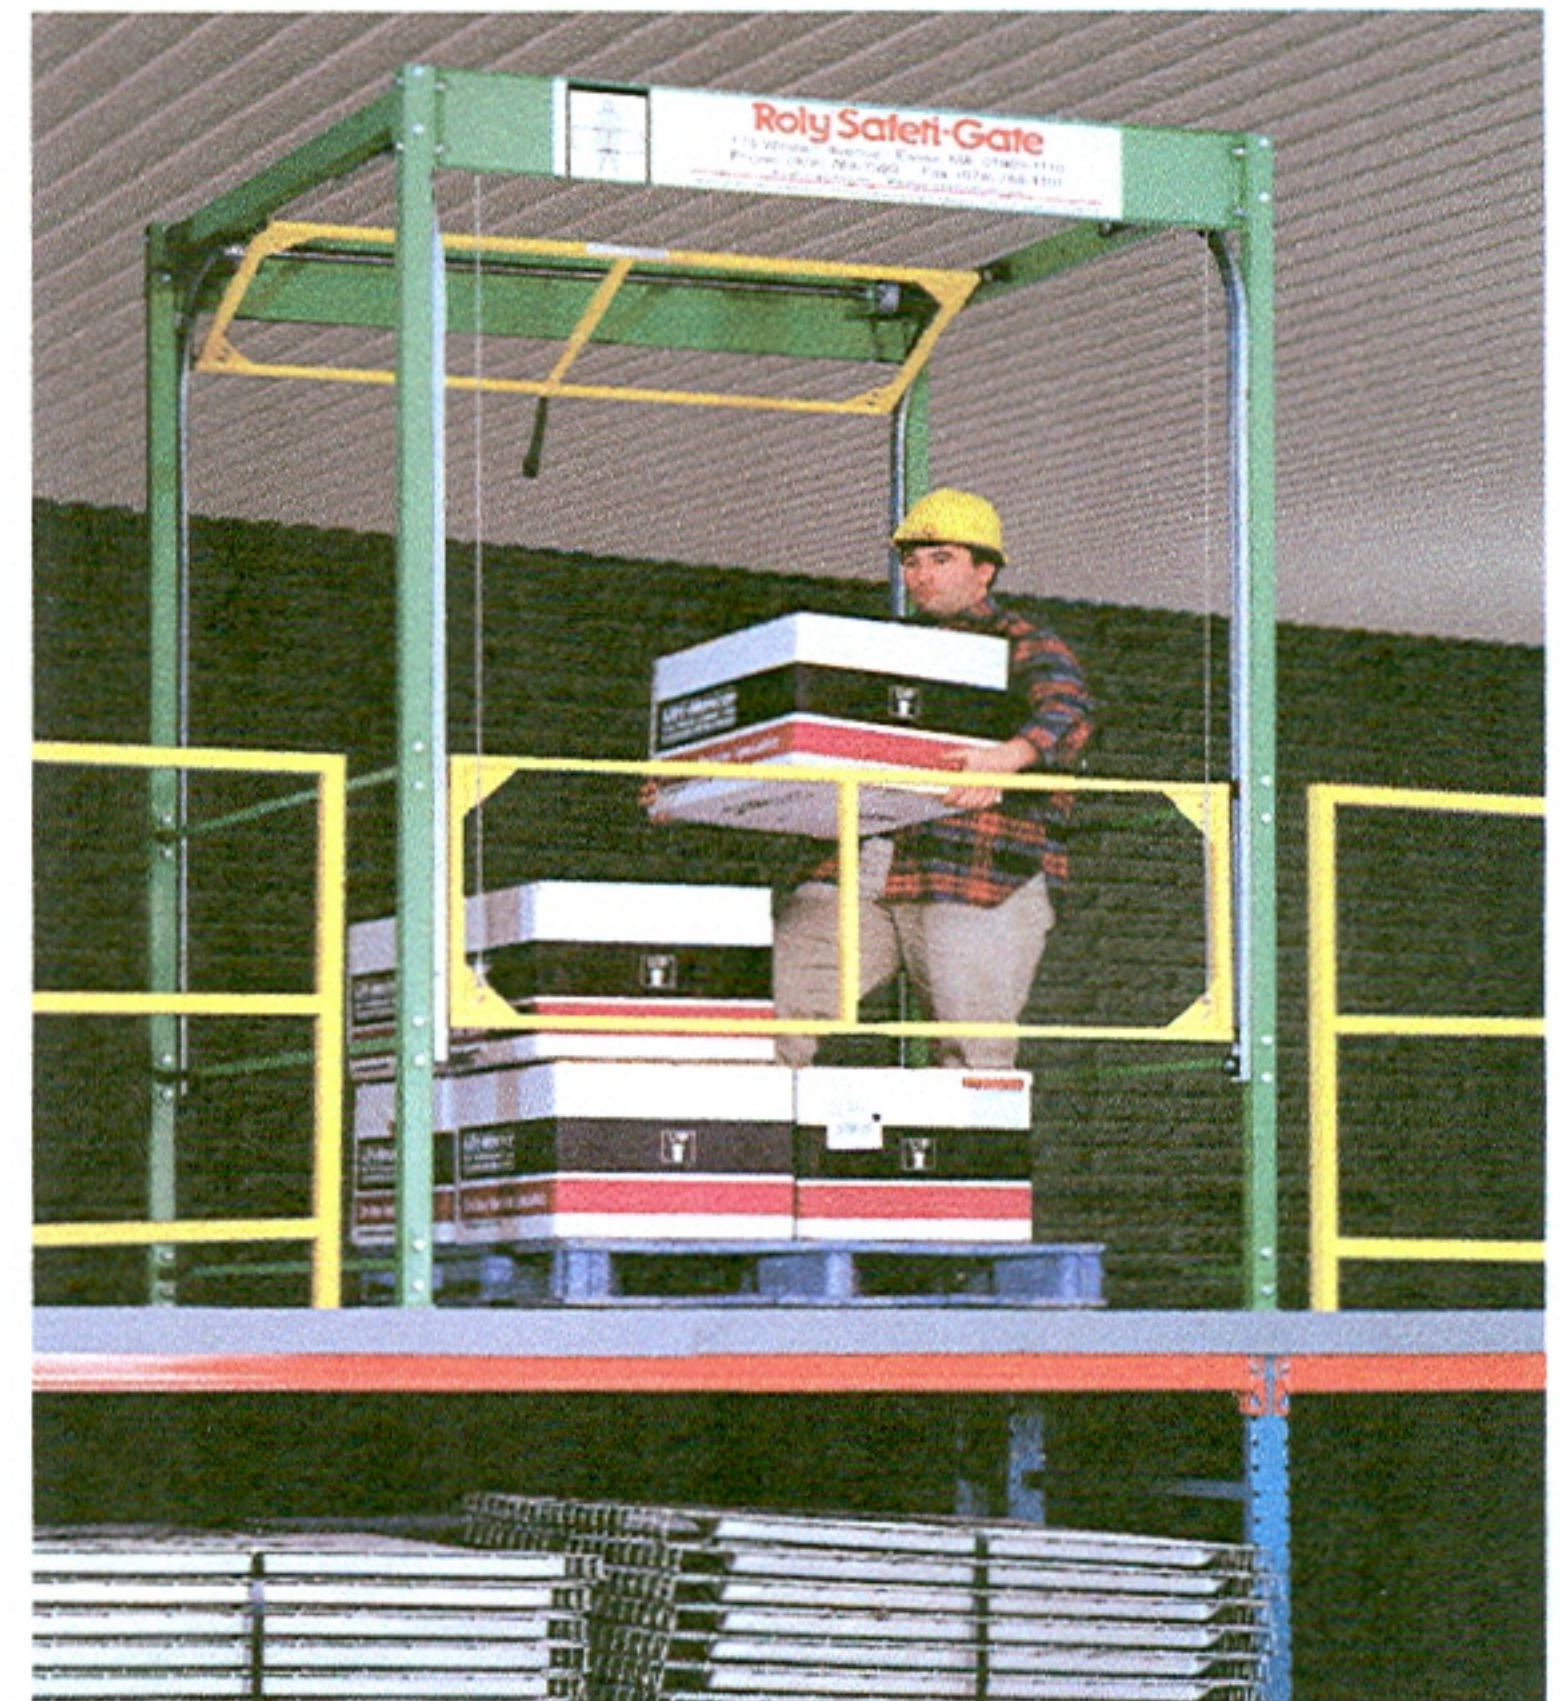

Chain and Sprocket design free standing and Rack Supported gates are available in the standard, two-rail OSHA compliant model or a four-rail BOCA/UBC/CAL-OSHA model. Individual or multiple line single-wide or double-wide units can be ordered. Custom units to fit within existing rack structures are easily ordered by simply supplying the brand, height and size of existing rack components, beam length, and upright depth and column shape.

Originally designed for a large national health and beauty aids chain, the Chain and Sprocket safety gates are being used by many companies in a wide range of industries. Most Chain and Sprocket gates are used in the Rack Supported gate design and are integrated into rack modules. Companies with this type of environment and the need for constant replenishment of supplies have had great

Chain and Sprocket units are manually operated, but power operation can be adapted to the gates. We supply a 110-volt, one-half horsepower, 1,000 RPM commercial motor with one three-button switch for open, close and stop. The push button station is positioned on or adjacent to the unit, while a second station can be added on the ground level to be accessed by the forklift driver. The power motor also includes a safety clutch that will engage if the gate is obstructed when closing. When necessary, radio frequency controllers can also be used for remote operation of the gates by a forklift operator.

The standard, all-steel Chain and Sprocket Safety Gate comes in high visibility yellow with contrasting blue or green support frames. Units can be painted to match existing rack components.
